

Joining forces through a
GLOBAL PARTNERSHIP

Driving Sustainability since 2023

Amplifying Impact through Collaboration

OUR PURPOSE

creating opportunities
to thrive. Together

OUR VISION

every interaction
enables positive
change by connecting
people across
the globe

OUR MISSION

delivering customer
value with passion

OUR VALUES

Family

Embrace inclusiveness and belonging

Integrity

Lead by example, trust and respect

Excellence

Enable quality, service, and performance

Innovation

Embrace agile decision making and new ideas

Community

Make a sustainable impact in our ecosystem

Joint Approach towards Sustainability

wesco approach – Increasing the importance of sustainability

2021/2022

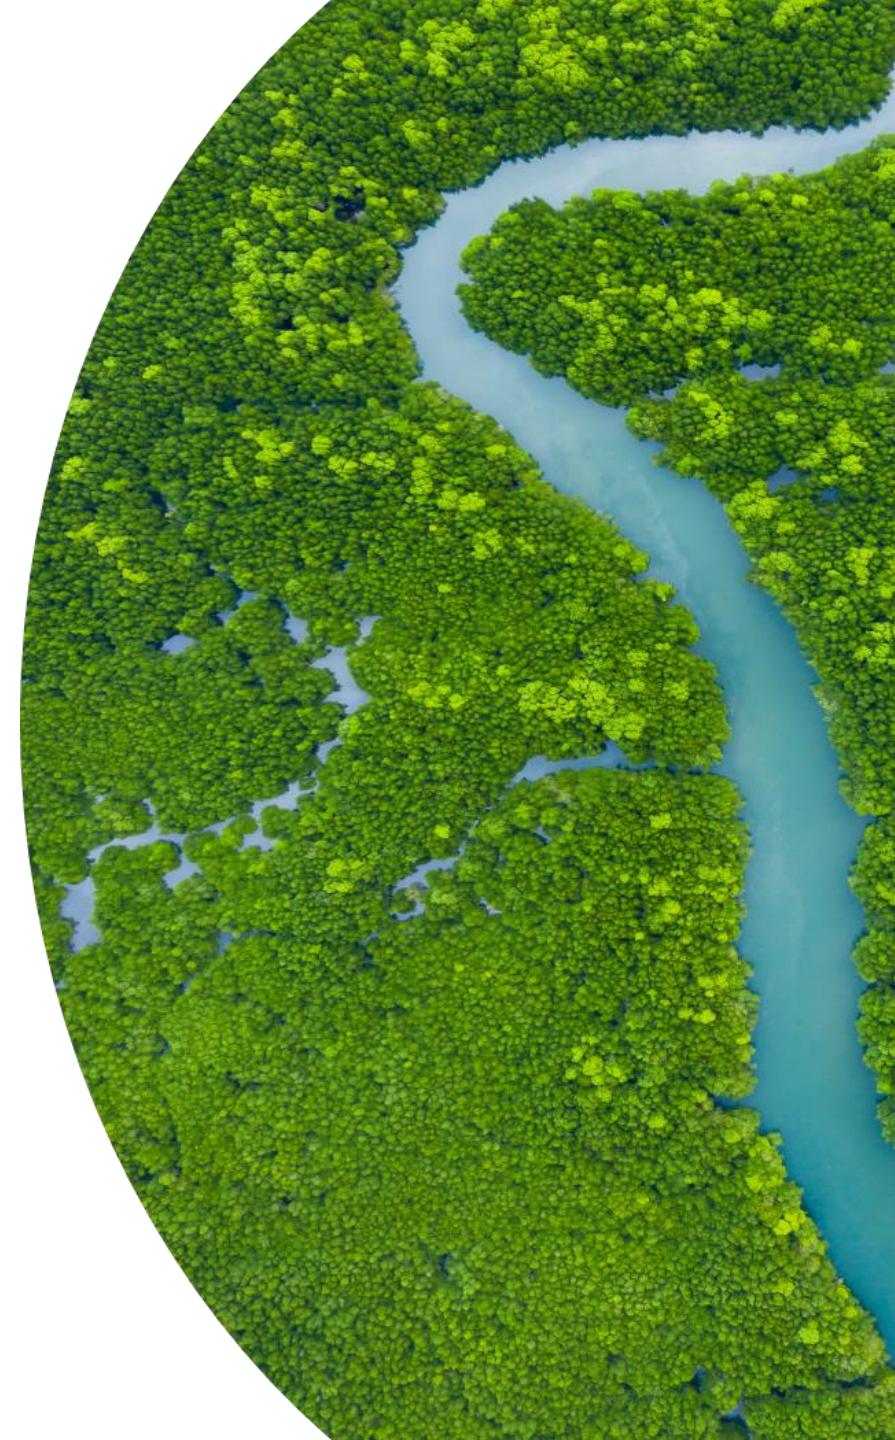

Socialize about Sustainability opportunities (QBRs)
Listen and Learn: What are the partners proud of?

2023

Interaction with large spent partners
Measure: Impact of operations on Wesco globally.

2024/ 2025

Focus on actions and communications
Implement: Establish measurable reductions

What JAS Can Do for Wesco Green Portfolio

CALCULATE

Through our partnership with **EcoTransIT**, we provide you with emission data encompassing all your transportation activity. Calculations are in accordance with **ISO14083** and the **GLEC** Framework.

Create visibility

CONSULT

By utilizing simulations and scenario analysis we can **identify** the most sustainable way forward for you including **cost, time** and **risk** considerations. We provide data and we help you understand how to use it.

Understand the potential

IMPLEMENT

Our green portfolio includes **network optimization** and **biofuel insetting** to reduce the emissions within your supply chain. We can alternatively provide **offsetting** options in high-quality climate protection projects.

Move from word to action

Sustainable Marine Biofuel Insetting

In partnership with  **GoodShipping**
better world

Slash your emissions to zero with JAS!

Marine biofuel achieves 75-90% CO₂e WtW*-reduction compared to the same amount of fossil fuel. By overallocation and using the mass balance principle we can help you to **reduce 100% of the CO₂e-emissions** caused by your ocean freight, which can be used against your scope 3 emissions.

BENEFITS FOR CARGO OWNERS

- > **SIMPLE** - A carrier-independent solution with minimal disruption to your operations.
- > **IMPACTFUL** - Immediate action within the same sector where emissions originate.
- > **CREDIBLE** - Third-party audits ensure sustainability claims are accurate and supported.

 Biofuel is made of 100% certifiable waste and residue streams only

HOW DOES IT WORK?

**Well-to-Wake (the emissions generated by the combustion of fuel for the vessel operation, as well as emissions from the production and distribution of that fuel prior its combustion).*

Carbon Offsetting Solution

In partnership with  lune

You can invest in climate protection projects to compensate for the emissions your shipment generates.

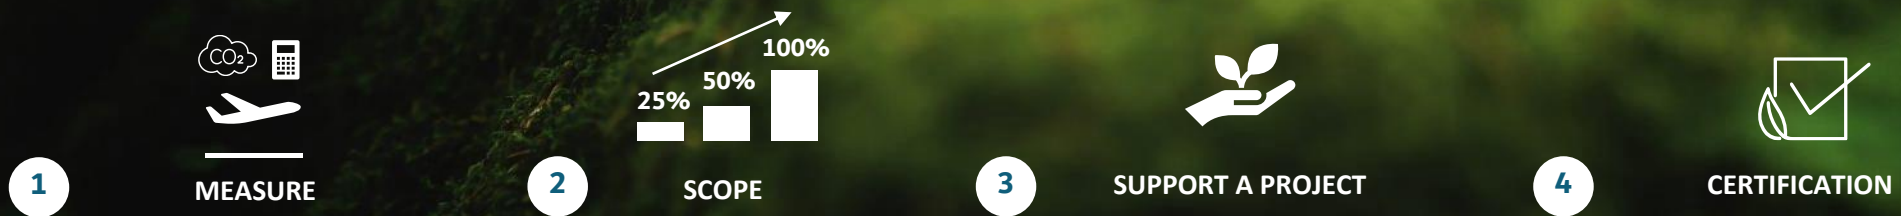

BENEFITS FOR CARGO OWNERS

- › Support **high-quality** carbon projects
- › Receive a carbon **certificate**
- › **Transparency** about what is happening on the ground
- › The chosen project(s) meet the **additionality principle**

The offset projects we support are of high-quality:

- Protecting Forests in Latin America
- Restoring Coastal Wetlands
- Concrete Mineralization
- Enhanced Rock Weathering

HOW DOES IT WORK?

+
2018
JAS is awarded first
shipment in October
